# **PORTFOLIO PRESENTATION**

# Problem Statement

---> Web apps in Azure allow you to publish and manage your website easily without having to work with the underlying servers, storage, or network assets. Instead, you can focus on your website features and rely on the robust Azure platform to provide secure access to your site.

---> These days, portfolio is a very professional way to represent our details and there is not a specific way to do the same. Recruiters are not sure whether there data is authenticated or not.

# PROBLEM SOLUTION

As We are very much concerned with the problem discussed before. So, we came to a solution. We have developed a site which will be very useful for the recruiter as well as for the user. The user can enter his/her own skills with the help of the test page, and can get the authenticated data which will help to make the user his/her portfolio standout from other portfolios because of authenticated skills and recruiter can use that authenticate data to compare that skills with other user's portfolio.

## Tech stack

.....

### ◆ Action 1

Nowadays common ways for developing our personal portfolios are by using some web languages like HTML, CSS, JavaScript, React.js, etc

### ◆ Action 2

**We have used HTML, CSS and JavaScript for developing our portfolio**

### ◆ Action 3

**We have also used Bootstrap, JQuery for the further enhancements of our website.**

### ◆ Action 4

**We used smtp.js to send details to an email and font awesome and other websites for various kind of logos**

# Scalability

- Personal Portfolios offer three scalability benefits over other investment account types:
- Transparency - your Personal Portfolio allows you to log in to the custodian's website at any time.
- Customization – your allocation will be personalized, based on what you tell us about your specific financial situation.
- Ownership - Our Personal Portfolios (save for Fixed Income) are primarily comprised of actual shares of stock, not a share of a mutual fund.

# Uniqueness

Setting up your own portfolio website is a fantastic way to express who you are as a creative, and to share your talents with the world.

In our website, user can take the test as we have discussed already and can get his/her data authenticated, which makes our portfolio unique as it can be used by the recruiter to compare with other applicant's resume.
