Introduction

► The "**Central Management System**" is a project which is very useful for the people to give them the best of the services in the city. This project is a multifield project so that it can be modified for various purposes.

PROBLEM STATEMENT

- As we all know, **Swiggy** and **Zomato** are two companies still in **losses** and unable to make profit in a single year then why not grow this idea to next level. Also, if we manage all the services like Gym, Restaurant, Shop, Barber, etc in a single app and connect the public with all the services it will be helpful for all the people to find the services easily.

Objective Of The Project

➢ To Connect The People To The Whole City With The Services In That City Through An Application.

➢ To Develop An Application To Solve The Difficulties Face By The Users/People To Find The Shops Or Their Required Service In The City Manually.

➢ New User Is Allowed To Register First And Allows Him To Search For His/her Required Service In The City.

➢ From Another End Users Offering Services Like Gym, Restaurant, Shop, Barber Etc. Will Also Be Able To Add The Services On The Application And Set The Prices, Schedule, Menu Etc. In The Application .

➢ Central Management System Is a Application Software Designed To Introduce A Conductive And Structured Service Exchanged Environment For Integrating Public, Services And End User Offering Service In City
